

Komodo dragons-*Varanus komodoensis*

We have been co-operating with veterinary Jaroslav Benda since July, he visits our zoo in intervals of 14 days with his USG apparatus. We have been trying to map the sexual cyclus of our female and find the most suitable time for mating. We have valued the reached results but we need more examinations.

We paired Elegant crested tinamou (*Eudromia elegans*) together but unfortunately the female died in the end of the year.

All these ducks belong to the government of Madagascar and their breeding is managed by Durrell Wildlife Trust in Jersey. We acquired also pair of rare Hawaiian duck (*Anas wyvilliana*).
